MecSoft Corporation

MecSoft Announces Rhino**ART** 1.0

FOR IMMEDIATE RELEASE

Irvine, CA – Aug 22, 2006: **MecSoft Corporation**, developer of industry leading CAM solutions announced today the release of their latest plug-in for **Rhinoceros 3.0** - **Rhino*ART***™.

MecSoft once again brings it's superior technology into the artistic and sign making world. This easy to use **Rhino*ART***™ product features the ability to instantaneously transform any 2D image into a beautifully sculptured native Rhino 3D geometry. This geometry can then be used as is or can be manipulated using Rhino's powerful modeling tools to create complex designs with minimal effort.
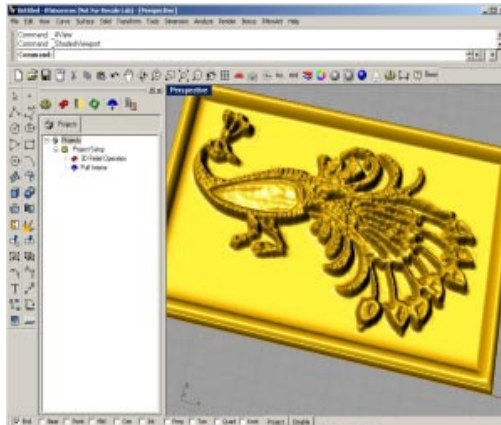

The geometry generation features in **Rhino*ART***™ include:

- Creation of 3D Relief from image files
- Ability to limit creation of reliefs using colors and/or curves
- Drawing 2D Curve geometry from image files
- Creating puffed up volumes using closed curves
- Creating sweep volumes using various profiles

"The powerful combination of Rhino's NURBS and mesh modeling features with the unique capabilities of RhinoART provides users with an completely new way of creating artistic models suitable for the jewelry and sign-making. We are excited about this revolutionary product and are looking forward to getting this to out to our user community."   says MecSoft's President Joe Anand a long time veteran of the CAD/CAM industry.

MecSoft has made available a downloadable trial version on their website:
